Ejemplo comparación de resultados predictores in sillico

Cambio de estudio CHD4 c.3820-1G>T (chr12:6583379 G/T, NM_001273.5:c.3820-1G>T)

Exón 25 e intrones adyacentes:

El cambio se encuentra en anterior posición al exón 25 (la **g** en color granate).

Se va a obtener los resultados que produce analizar esta variable con los diferente predictores y ver cuál de ellos es más preciso.

Hay tres resultados (en verde, azul y amarillo) que son la misma región pero cambiando el nucleótido de estudio (de G a T). El resultado en 300 (en rojo) se pierde en la secuencia mutante, mientras que el cambio en 312 (en granate) no se encuentra en la secuencia WT. La predicción con 0.97 de *confidence* (en rojo) es la que predice correctamente la separación entre el intrón 24 y el exón 2. Al desaparecer, parece que provoca que se active un sitio críptico en el interior del exón (en granate), lo que provocaría la pérdida de los primeros 12 nucleótidos del exón (GAGGAAGAGGAG), que van desde el final del *acceptor* que se pierde hasta el final del *acceptor* que se gana. Si, por el contrario, se usara el *acceptor* anterior (en 166), se produciría la inclusión de 134 nt en el exón.

Se pierde un sitio *acceptor* (en rojo) en la secuencia mutante, que coincide con el sitio *acceptor* del exón 25. Si en vez de este sitio se empleara el anterior (en 146), se produciría la inclusión de 134 pb o bien si se utilizara el siguiente (en 545) con el *donor* normal, se perderían los primeros 265 nt del exón.

MaxEntScan (solo realizamos el análisis del 3'SS porque está por delante del exón y, si afecta a un sitio de *splicing*, será de este tipo)

MAXENT: -47.41 MM: -38.85 WMM: -30.84

El único cambio es que aparece un nuevo BP en la secuencia mutante, aunque tiene una puntuación negativa muy baja, por lo que no lo tendremos en cuenta.

Variant Effect Predictor tool

Se trata de una variante que está afectando al sitio de *splicing*, concretamente al *acceptor* (21/39 resultados para CHD4).

ESEfinder

Solo se obtiene un resultado positivo donde se encuentre la posición de estudio (g antes de las mayúsculas del exón) para las matrices 5'SS:

298 (-445)	cagGAGGAAGAGGAGGTAGAACGGGAAATC	5.85330	298 (-445)	cagGAGGAAGAGGAGGTAGAACGGGAAATC	-12.40900	298 (-445)	cagGAGGAAGAGGAGGTAGAACGGGAAATC	5.58090	298 (-445)	cagGAGGAAGAGGAGGTAGAACGGGAAATC	-13.57770

Si buscamos el resultado equivalente para la secuencia mutante, se observa que las puntuaciones se mantienen prácticamente las mismas:

298 (-445)	catGAGGAAGAGGAGGTAGAACGGGAAATC	5.23340	298 (-445)	catGAGGAAGAGGAGGTAGAACGGGAAATC	-10.74730	298 (-445)	catGAGGAAGAGGAGGTAGAACGGGAAATC	4.94100	298 (-445)	catGAGGAAGAGGAGGTAGAACGGGAAATC	-12.00900

Por lo tanto, esta región no estará alterando al *splicing*.

Sin embargo, hay dos resultados positivos para las matrices 3'SS (286 y 289):

286 (-457)	ctccctctgtcccagGAGGAAGAGGAGGTA	-10.05210	286 (-457)	ctccctctgtcccagGAGGAAGAGGAGGTA	12.52000	286 (-457)	ctccctctgtcccagGAGGAAGAGGAGGTA	-6.79730	286 (-457)	ctccctctgtcccagGAGGAAGAGGAGGTA	12.37840
287 (-456)	tccctctgtcccagGAGGAAGAGGAGGTAG	-21.69230	287 (-456)	tccctctgtcccagGAGGAAGAGGAGGTAG	-9.18820	287 (-456)	tccctctgtcccagGAGGAAGAGGAGGTAG	-19.92170	287 (-456)	tccctctgtcccagGAGGAAGAGGAGGTAG	-7.13990
288 (-455)	ccctctgtcccagGAGGAAGAGGAGGTAGA	-10.34150	288 (-455)	ccctctgtcccagGAGGAAGAGGAGGTAGA	-27.49110	288 (-455)	ccctctgtcccagGAGGAAGAGGAGGTAGA	-8.59920	288 (-455)	ccctctgtcccagGAGGAAGAGGAGGTAGA	-29.05540
289 (-454)	cctctgtcccagGAGGAAGAGGAGGTAGAA	-10.97690	289 (-454)	cctctgtcccagGAGGAAGAGGAGGTAGAA	2.64250	289 (-454)	cctctgtcccagGAGGAAGAGGAGGTAGAA	-7.77060	289 (-454)	cctctgtcccagGAGGAAGAGGAGGTAGAA	1.95420

Si buscamos el resultado equivalente para la secuencia mutante, se observa que las puntuaciones para el primer resultado se reducen drásticamente, mientras que para el segundo se mantienen similares:

286 (-457)	ctccctctgtcccatGAGGAAGAGGAGGTA	-14.02190	286 (-457)	ctccctctgtcccatGAGGAAGAGGAGGTA	0.43240	286 (-457)	ctccctctgtcccatGAGGAAGAGGAGGTA	-10.72050	286 (-457)	ctccctctgtcccatGAGGAAGAGGAGGTA	-0.57500
287 (-456)	tccctctgtcccatGAGGAAGAGGAGGTAG	-21.76050	287 (-456)	tccctctgtcccatGAGGAAGAGGAGGTAG	-4.62030	287 (-456)	tccctctgtcccatGAGGAAGAGGAGGTAG	-19.92640	287 (-456)	tccctctgtcccatGAGGAAGAGGAGGTAG	-5.48140
288 (-455)	ccctctgtcccatGAGGAAGAGGAGGTAGA	-11.43880	288 (-455)	ccctctgtcccatGAGGAAGAGGAGGTAGA	-21.07160	288 (-455)	ccctctgtcccatGAGGAAGAGGAGGTAGA	-9.62610	288 (-455)	ccctctgtcccatGAGGAAGAGGAGGTAGA	-22.12040
289 (-454)	cctctgtcccatGAGGAAGAGGAGGTAGAA	-11.43610	289 (-454)	cctctgtcccatGAGGAAGAGGAGGTAGAA	2.70890	289 (-454)	cctctgtcccatGAGGAAGAGGAGGTAGAA	-8.26440	289 (-454)	cctctgtcccatGAGGAAGAGGAGGTAGAA	1.95860

Por lo tanto, se está perdiendo un sitio 3'SS (*acceptor*) en la secuencia mutante, provocando una más que probable alteración del *splicing.*
